Forest Ecology and Management, 42 (1991) 311–312
Elsevier Science Publishers B.V., Amsterdam

Author Index

Bartelink, H.H., *see* Mohren, G.M.J. et al.
Bartling, P.N.S., *see* Mitchell, J.E. and Bartling, P.N.S.
Bonan, G.B., *see* Urban, D.L. et al.
Bossel, H., Krieger, H., Schäfer, H. and Trost, N.
Simulation of forest stand dynamics, using real-structure process models 3
Bossel, H.
Modelling forest dynamics: moving from description to explanation 129
Chojnacky, D.C.
Growth prediction for Arizona's mesquite (*Prosopis velutina*) woodlands 293
Cordell, C.E., *see* Hua, X. et al.
Fulton, M.R.
A computationally efficient forest succession model: Design and initial tests 23
Harrison, A.F., *see* Jones, H.E. et al.
Helmisaari, H., *see* Prentice, I.C. and Helmisaari, H.
Hix, D.M. and Lorimer, C.G.
Early stand development on former oak sites in southwestern Wisconsin 169
Hua, X., Cordell, C.E. and Stambaugh, W.J.
Synthesis of *Pisolithus tinctorius* extomycorrhizae and growth responses on some commercially important Chinese tree species 283
Hall, J.B.
Multiple-nearest-tree sampling in an ecological survey of Afromontane catchment forest 245
Jones, H.E., Quarmby, C. and Harrison, A.F.
A root bioassay test for nitrogen deficiency in forest trees 267
Kellomäki, S. and Väisänen, H.
Application of a gap model for the simulation of forest ground vegetation in boreal conditions 35
Kienast, F. and Kräuchi, N.
Simulated successional characteristics of managed and unmanaged low-elevation forests in central Europe 49
Kolström, T.
Modelling early development of a planted pine stand as an application of object-oriented programming 63
Kräuchi, N., *see* Kienast, F. and Kräuchi, N.
Krieger, H., *see* Bossel, H. et al.
Lorimer, C.G., *see* Hix, D.M. and Lorimer, C.G.
Mitchell, J.E. and Bartling, P.N.S.
Comparison of linear and nonlinear overstory–understory models for ponderosa pine .. 195
Mohren, G.M.J., van Hees, A.F.M. and Bartelink, H.H.
Succession models as an aid for forest management in mixed stands in The Netherlands 111
Otegbeye, G.O. and Samarawira, I.
Growth and form of *Eucalyptus camaldulensis* Dehnh. provenances in northern Nigeria 219

Peterson, C.J. and Pickett, S.T.A.
Treefall and resprouting following catastrophic windthrow in an old-growth hemlock–hardwoods forest 205
Pickett, S.T.A., *see* Peterson, C.J. and Pickett, S.T.A.
Prentice, I.C. and Helmisaari, H.
Silvics of north European trees: compilation, comparisons and implications for forest succession modelling 79
Quarmby, C., *see* Jones, H.E. et al.
Sabin, T.E., *see* Schowalter, T.D. et al.
Samarawira, I., *see* Otegbeye, G.O. and Samarawira, I.
Schäfer, H., *see* Bossel, H. et al.
Schowalter, T.D., Sabin, T.E., Stafford, S.G. and Sexton, J.M.
Phytophage effects on primary production, nutrient turnover, and litter decomposition of young Douglas-fir in western Oregon 229
Sexton, J.M., *see* Schowalter, T.D. et al.
Shugart, H.H., *see* Urban, D.L. et al.
Smith, T.M., *see* Urban, D.L. et al.
Stafford, S.G., *see* Schowalter, T.D. et al.
Stambaugh, W.J., *see* Hua, X. et al.
Trost, N., *see* Bossel, H. et al.
Urban, D.L., Bonan, G.B., Smith, T.M. and Shugart, H.H.
Spatial applications of gap models 95
Väisänen, H., *see* Kellomäki, S. and Väisänen, H.
Van Hees, A.F.M., *see* Mohren, G.M.J. et al.
Vanclay, J.K.
Aggregating tree species to develop diameter increment equations for tropical rainforests 143

Forest Ecology and Management, 42 (1991) 313–314
Elsevier Science Publishers B.V., Amsterdam

Subject Index

Acer
Silvics of north European trees: compilation, comparisons and implications for forest succession modelling 79
Early stand development on former oak sites in southwestern Wisconsin 169
Douglas-fir, *see Pseudotsuga*
Environmental conditions
Treefall and resprouting following catastrophic windthrow in an old-growth hemlock–hardwoods forest 205
Eucalyptus
Growth and form of *Eucalyptus camaldulensis* Dehnh. provenances in northern Nigeria 219
Fraxinus
Early stand development on former oak sites in southwestern Wisconsin 169
Ground vegetation
Application of gap model for the simulation of forest ground vegetation in boreal conditions 35
Growth substances
Synthesis of *Pisolithus tinctorius* ectomycorrhizae and growth responses on some commercially important Chinese tree species 283
Hemlock, *see Tsuga*
Modelling
Simulation of forest stand dynamics using real-structure process models 3
A computational efficient forest succession model: design and initial tests 23
Application of gap model for the simulation of forest ground vegetation in boreal conditions 35
Simulated successional characteristics of managed and unmanaged low-elevation forests in central Europe 49
Modelling early development of a planted pine stand: an application of object-oriented programming 63
Silvics of north European trees: compilation, comparisons and implications for forest succession modelling 79
Spatial applications of gap models 95
Succession models as an aid for forest management in mixed stands in The Netherlands 111
Modelling forest dynamics: moving from description to explanation 129
Aggregating tree species to develop diameter increment equations for tropical rainforests 143
Comparison of linear and nonlinear overstory–understory models for ponderosa pine .. 195
Growth prediction for Arizona's mesquite (*Prosopis velutina*) woodlands 293
Nitrogen, *see* Nutrient dynamics
Nutrient dynamics
Phytophage effects on primary production, nutrient turnover, and litter decomposition of young Douglas-fir in western Oregon 229
A root bioassay test for nitrogen deficiency in forest trees 267

Pests, weeds and diseases
Phytophage effects on primary production, nutrient turnover, and litter decomposition of young Douglas-fir in western Oregon 229
Pinus
Modelling early development of a planted pine stand: an application of object-oriented programming 63
Comparison of linear and nonlinear overstory–understory models for ponderosa pine .. 195
Pisolithus tinctorius
Synthesis of *Pisolithus tinctorius* ectomycorrhizae and growth responses on some commercially important Chinese tree species 283
Prosopis
Growth prediction for Arizona's mesquite (*Prosopis velutina*) woodlands 293
Prunus
Early stand development on former oak sites in southwestern Wisconsin 169
Pseudotsinga pinus
Succession models as an aid for forest management in mixed stands in The Netherlands 111
Pseudotsuga
Phytophage effects on primary production, nutrient turnover, and litter decomposition of young Douglas-fir in western Oregon 229
Quercus
Early stand development on former oak sites in southwestern Wisconsin 169
Rainforests
Aggregating tree species to develop diameter increment equations for tropical rainforests 143
Multiple-nearest-tree sampling in an ecological survey of Afromontane catchment forest 245
Sampling techniques
Multiple-nearest-tree sampling in an ecological survey of Afromontane catchment forest 245
Stand dynamics
Silvics of north European trees: compilation, comparisons and implications for forest succession modelling 79
Simulation of forest stand dynamics using real-structure process models 3
A computational efficient forest succession model: design and initial tests 23
Simulated successional characteristics of managed and unmanaged low-elevation forests in central Europe 49
Modelling early development of a planted pine stand: an application of object-oriented programming 63
Spatial applications of gap models 95
Succession models as an aid for forest management in mixed stands in The Netherlands 111
Modelling forest dynamics: moving from description to explanation 129
Early stand development on former oak sites in southwestern Wisconsin 169
Tilia
Early stand development on former oak sites in southwestern Wisconsin 169
Tsuga
Treefall and resprouting following catastrophic windthrow in an old-growth hemlock–hardwoods forest 205
Wind, *see* Environmental conditions
